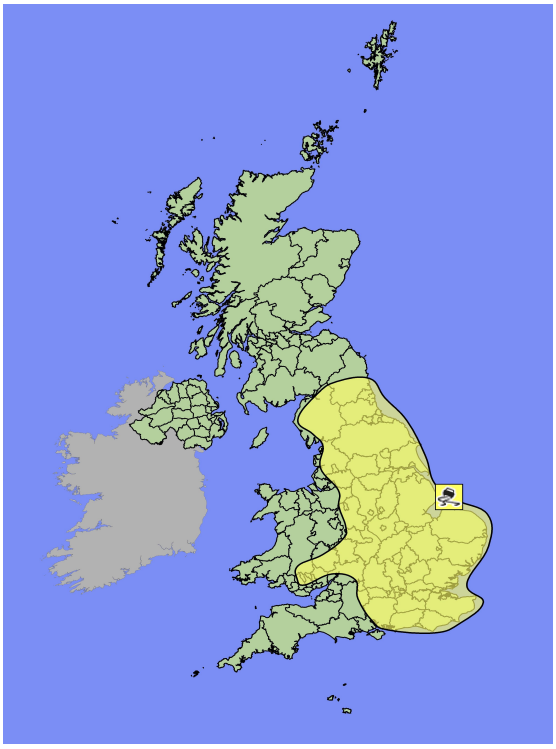
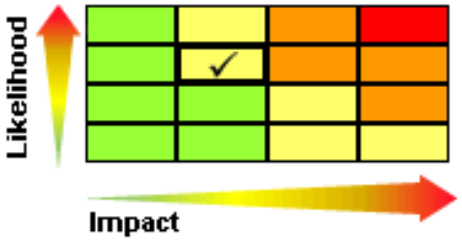
National Severe Weather Warning Service





Chief Forecasters Assessment
There are a number of reasons that ice is likely to be a hazard during Sunday evening and overnight into Monday. These include, snowfall from Saturday night persisting on untreated surfaces across eastern parts of England, whilst snow that melts during the afternoon will freeze on untreated surfaces by early evening. There is also a risk of showers affecting parts of northwest England this evening, which will then extend southeast into the Midlands and eventually parts of southeast England, including the London area, later in the night. Most showers will fall as rain, which will freeze onto sub-zero surfaces in central and eastern parts of England, whilst there is a lower probability that some of the showers will give 1-2 cm of snow in a zone extending from southwest Lincolnshire to East Sussex.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **15:00 on Sun, 05th Feb 2012** until **12:00 on Mon, 06th Feb 2012**

Ice is likely to be a hazard on roads and pavements across parts of southeast Wales and much of England, except the southwest. The public should be aware of the risk of disruption to travel.
